^{City} Bikes and Urban transport.

For us, the urban transport is the set of ways by which people can move from one place to another. The different types of urban transport are:

1. Car, is the urban transport more used because it is the individual transport more comfortable and faster. But the combustible is expensive and it is the most contaminant for the environment.
2. Bus, as cars, ^{ing are} it is a means of transport (fast) in addition it is public, so it is less contaminant. However you have to pay the travel and it doesn't leave you at your exact destination.
3. Taxi, is a means of transport of private use and it leaves when you want. Moreover the price is more expensive.
4. Motorcycle, this has a peculiarity because the motorcycle has only two seats so it is smaller. In this way it is faster and easier to park. But it is more dangerous because the number of accidents increase.
5. Streetcar, is a means of public transport used to travel shorts and long distances, by the same price of bus.
6. Metro, is another means of public transport used to travel only for the town. Its advantages are: the speed, the price, the security and the organization. Its disadvantages are: agglomeration and intolerance.
7. Train, is a means of public transport used for many people to short and long distances, sometimes the frequency is limited and there are not itinerary for all cities.

In our opinion, the urban transports is very important because it lets us move around the city in a fast and easy way. However they have serious consequences for the environment, the most important thing is that it produces carbon dioxide and pollution. Also it can become annoying ^{due to the} for noise that it emits, for example in a traffic. In addition it can become dangerous if someone doesn't use it correctly, for example when someone drinks. In fact a lot of deaths in one year are produced for traffic accidents, especially in cars. Thus means of communication show us advertisement about traffic accidents and its consequences.

No Introduction
Enumeration, not elaboration of one idea
Mix of different ideas without connection

We are going to focus ^{on} the bicycles:

It is a vehicle consisting of a light frame mounted on two wire-spoked wheels one behind the other and having a seat, handlebars for steering, brakes, and two pedals or a small motor by which it is driven. This means of transport has advantages like:

- Great for exercise, evidenced by my new ability to conquer the steep hill home
- Low cost (provided you can keep control over the urge to acquire new cycling-accessories).
- Does not pollute the environment.
- Faster than walking and no slower than a car in cities. Today I averaged 12mph while running errands.
- No need to hunt for a parking space – this is a big plus where we live as spaces are scarce.

Also it has disadvantages like:

- Difficult to move large or multiple items. I will be borrowing my wife's car tomorrow to deliver all my tools to my new place of work.
- Not quick over long distances – however it can still be used to travel quickly to a local train station.
- Safety – not all road users are generous towards the vulnerable cyclist.
- It can leave the rider dirty and smelly after a long ride. Showers at work, combined with cycle-specific clothing may be necessary.

In general the bicycles are ~~a~~ ^{they are} good means of transport because it ~~is~~ ^{they} easy to use, it ~~do~~ ^{they} n't pollute the environment and you do exercise from time to time. Ready for use also it is necessary to wear right clothes, helmet, kneepad and elbow patch. In addition someone know ride a bike because it is very easy, so you don't worry if you don't know ride a bike.

why?

→ contradiction

Everybody knows that. → No relevant information, only a way of filling paper.
