BICYCLES

The bicycle known colloquially as bike, is a means of transport very common in our society both in urban and in rural. It is a theme to consider because it has many advantages as well as disadvantages that affect us in the day to day. Then some of the advantages and disadvantages more common:

Advantages:

- **They favor to the environment:** The use of the bicycles reduce ^{the} atmospheric pollution level that exist in the Earth and that today unfortunately is abundant in most countries.

- **They are more economic:** Bicycles are quite cheaper than many other means of transport (cars, motorbikes...), also their maintenance for example ^{doesn't} require the additional buy of gasoline to function.

- **They help to be in form:** They help us to keep us in form and ^{developing our} physical capacities ^{and mental} and also the mental.

- **They can be used at any age:** The use of the bicycles like means of transport ^{doesn't} required any license ^{very badly expressed} with the difference than the other for example the cars that allow you to drive at the age of 18 and motorbike at the age of 16. ?

- **Parking:** Find a good place to leave the bicycle is much easier that with other means of transport ^{it} this is because they are smaller and more manageable. In addition it is not necessary to pay a toll for parking in special places.

Disadvantages:

- **They can be stolen easier than other means of transport:** The bicycles have more ^{it} possibility ^{to be stolen} of to be steal than others means of transport for example: cars, motorcycle? Is easier, because the secure of the bicycle is more simple than the secure of a car.

- **You can't use the bicycle with bad climate:** To use the bicycle with a bad climate, can be dangerous, however if you can use a car, is less dangerous. Both can be mortal, but, in this case, is better to use a car than the bicycle since your body feels safer.

- **Bicycle is a mean of transport (slow):** Although the bicycle help us to go faster through the city since there isn't to wait in the traffic jams, when comparing the speed that can reach a car for example, is negligible. In addition, get speed a long time becomes tired ~~withstand~~ forces up to a limit.

- **The bikes are dangerous:** They are dangerous because the body is less protected and the impact can be fatal. Protection is sometimes not enough, also as they are small, so do not look, and cause accidents. Reflective is recommended.

- **No available space to store luggage:** A bicycle doesn't have the capacity to carry large loads both people and things, so this is a big disadvantage.

what

road transport

why?

we speak about city transport

Not true

Shock statistics to support your ideas.

The Earth includes all countries

what is the relation between maintenance and gasoline?

doesn't very badly expressed

!!! Not sense

CONCLUSION OF THE BICYCLES AND CITY TRANSPORT

Our group has come to the following conclusion: we think that the bicycle and public transport are in general good for many reasons, (including all those already covered) and that most of its disadvantages can be reduced using a controlled and taken care of the means of transport, although there are some that cannot be fixed as that animals cannot travel in the majority of public transport.
