

"BICYCLES AND CITY TRANSPORT"

Bicycle not having a motor contributes to a more peaceful, healthy and livable urban environment. produces not noise and consumes only human energy helping us to consume calories. Using the bike we contribute to generating fewer gases that harm the environment and our health.

Repetition

Riding a bike is a habit of healthy life as it is an aerobic sport ^{that} can be done by most people. In addition as does not pollute and the silent, helps welfare of people.

This transport also benefits both the rider and the other people; the rider benefits from the low cost of buying and maintaining compared to other transport, by saving wasted time in traffic jams and improving physical health, and other people because not cause harmful gases.

Being a small vehicle in combination with his speed and mobility enable the bike has to do a more many efficient use of space. It is also comfortable carrying and can be used by many people because it is easy to use for all ages, this makes this a high degree of autonomy.

What?

No relation with the paragraph.

The bike has many advantages however there is a small percentage of people who can't use them, for these people is the public transport.

it → It is for everybody.

Although ~~are~~ motorized public transport help ^{to} regulate the amount of gases harmful to our health because on one vehicle can climb vallan many people who have done the same or a similar path this way trips each vehicle makes better use.

With these public transport and bikes, the streets of cities do not collapse as more people get on in the same transport and noise and environmental pollution is reduced. Moreover saves time because they do not have to worry about looking in saturated parking areas. These transports are the best option for getting around town.

→ which ones?

→ which ones?

The use of public transport means the most ecological and solidarity for many of the displacements are made within the urban alternative. Ruefully the statistics say that nowadays only used the bus who has no choice.

Adjective

Noun

→ looking for a parking space

→ which statistics? Show them.

We must help change this tendency, as car use becomes increasingly unsustainable for the

↳ which tendency?

Conclusion in the middle of the essay?

environment. In the great city car should be the last option when there is no alternative to more reasonable and sustainable travel. Each citizen should know the line that can best adapt to their needs for work, education or leisure, and test; you could find so you can save time in traffic and looking for parking, gas, money, illegal parking, etc.

However public transport undergo people into strick timetables and doesn't arrive to all the places, sometimes limit the transport of baggage and might even happen that the vehicle is crowded and you can not enter.

In conclusion for a healthy life for all citizens we should use more bike that not only helps us to stay strong but that does not pollute our city and harms our neighbors. It is a vehicle easy to use and cofortable which gives us bigger autonomy. And we have not waste time in traffic jams. Even over to short distances we can can arrive before than other transport with our bike. *with*

different spacing (packing quickly)

Some people think that the private vehicle is essential for getting around town, but it is not true. 50% of urban journeys are made by car are to cover distances of less than three kilometers and about 10% of these displacements barely cover distances of less than 500 meters.

→ show statistics. there are many different types of cities.

Especially in cities is where these journeys are made less than five kilometers and where it is easier to replace private vehicles with alternative transport. The average time it takes to travel a distance of two miles by bike, counting traffic lights, is approximately 15 minutes. Much shorter than we invest in making the same drive. In the European Union are held every weekday twelve and a half million trips of this type, representing an annual expenditure of about 6,250 million liters of fuel could be saved with such a simple as this gesture. ?

However if we have not bike or can not use it, we have the public transport in wich people take advantage of the different routes an are mounted on the same vehicle. This is a good option for people who can not use the bicycle. → Repetition

In ~~my~~ ^{our} opinion ~~we~~ ^{we} think that we have the necessary steps to care for our city and our planet we only just have use those steps that in addition are better for us and our enviroment.
